Continental Realty EV Charging

Challenge
Continental Realty Corp. (CRC) is one of the most respected real estate investors and operators in the Mid-Atlantic and Southeast. Their portfolio consists of more than five million square feet of commercial space and nearly 10,000 apartment homes in 8 states. Since 80% of EV charging occurs at home, CRC recognized the growing need for electric vehicle (EV) charging access at their multifamily properties in Maryland, allowing residents a convenient place to recharge their EVs.

Our Solution
CRC partnered with MD Energy Advisors, BGE, ICF, the Maryland Energy Administration and ChargePoint to develop an EV implementation strategy for a group of 5 multifamily properties. The project was a success, resulting in 5 charging stations with 8 ports, leveraging incentives from BGE and the Maryland Energy Administration, totaling $58,067 in rebates.

“MD Energy Advisors was very helpful at navigating the process and understanding the pros and cons of all options in the market. The most helpful aspect of MD Energy Advisors’ role was to have an unbiased third party to bounce ideas off of and ask questions regarding equipment and setting up operations.”

Joseph Schaefer
REAL ESTATE MANAGER
CONTINENTAL REALTY CORPORATION
