## On-Site Solar

### Energy Problem

When a century-old producer of fruit spreads committed to becoming a more sustainable company, it looked at ways to reduce energy consumption across its 27 locations, including 15 manufacturing plants. The company's active energy management program and its continuous evaluation of on-site and off-site renewable energy sources provided opportunity to diversify their energy portfolio. They needed help achieving sustainability and meeting budgetary goals without interrupting their production business.

### Our Solution

MD Energy Advisors recommended on-site solar because the manufacturer owned the building and was responsible for paying its utility bills.
